National Healthcare Agreement: PI 03-Prevalence of overweight and obesity, 2015

Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Progress measure

Short name: PI 03-Prevalence of overweight and obesity, 2015

METEOR identifier: 559062

Registration status: Health, Superseded 08/07/2016

Description: Prevalence of overweight and obesity in adults and children.

Indicator set: National Healthcare Agreement (2015)

Health, Superseded 08/07/2016

Outcome area: Prevention

Health, Standard 07/07/2010

Data quality statement: National Healthcare Agreement: PI 03-Prevalence of overweight and obesity, 2015

QS

Health, Superseded 31/01/2017

Collection and usage attributes

Computation description: Body Mass Index (BMI) is calculated as weight (in kilograms) divided by the square

of height (in metres).

For adults, obesity is defined as a BMI of greater than or equal to 30.00 and

overweight is defined as a BMI of 25.00-29.99.

For children, obesity is defined as a BMI (appropriate for age and sex) that is likely to be 30.00 or more at age 18 years, and overweight is defined as a BMI

(appropriate for age and sex) that is likely to be 25.00–29.99 at age 18 years, based on centile curves. See ABS National Health Survey: Users' Guide Electronic Publication, 2007–08 (ABS Catalogue no. 4363.0.55.001) for BMI

values.

Rates are directly age-standardised to the 2001 Australian population.

Excludes pregnant women where identified and people with an unknown BMI.

Analysis by remoteness and Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socio-economic Disadvantage (IRSD) is based on usual residence of

person.

Presented as a percentage.

95% confidence intervals and relative standard errors calculated for rates.

Computation: 100 × (Numerator ÷ Denominator)

Calculated separately for adults and children.

Numerator: <u>Adults</u>: Number of persons aged 18 years or over who are obese or overweight.

Children: Number of persons aged 5–17 years who are obese or overweight.

Disaggregation:

2011–12 (previously supplied)—For each of adults and children, state and territory, by:

- sex by age (adults only)
- Indigenous status (non-Indigenous only)
- remoteness (Australian Statistical Geography Standard (ASGS) Remoteness Structure)
- 2011 Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socioeconomic Disadvantage (IRSD) quintiles
- BMI category (underweight, normal, overweight, obese)
- disability status

2011–12 (previously supplied)—For adults, nationally, by:

- sex by remoteness (ASGS Remoteness Structure)
- 2011 SEIFA IRSD deciles
- remoteness (ASGS Remoteness Structure) by 2011 SEIFA IRSD deciles.

2011–13 (updated for full AATSIHS)—For each of adults and children, state and territory, by:

• Indigenous status (Indigenous only)

Some disaggregation may result in numbers too small for publication.

Most recent data available for 2015 National Healthcare Agreement (NHA) Comments:

performance reporting: 2011–12 (total population, non-Indigenous: AHS); 2012–13

(Indigenous only: AATSIHS).

2011–13 data are based on measured height and weight. BMI derived from measured height and weight is preferable to that derived from self-reported height and weight.

2004-05 data are based on self-reported height and weight and are not comparable to 2011-13 data.
