National Healthcare Agreement: PB f-By 2014-15, improve the provision of primary care and reduce the proportion of potentially preventable hospital admissions by 7.6 per cent over the 2006-07 baseline to 8.5 per cent of total hospital admissions, 2015

Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: PB f-By 2014-15, improve the provision of primary care and reduce the proportion

of potentially preventable hospital admissions by 7.6 per cent over the 2006-07

baseline to 8.5 per cent of total hospital admissions, 2015

METEOR identifier: 559070

Registration status: Health, Superseded 08/07/2016

Description: By 2014–15, improve the provision of primary care and reduce the proportion of

potentially preventable hospital admissions by 7.6 per cent over the 2006–07 baseline to 8.5 per cent of total hospital admissions (Baseline specification).

There are two parts to this performance benchmark:

1. Improved provision of primary care

2. Reduced potentially preventable hospital admission

For Part 1, the measure is under development. For Part 2, the measure is defined

below.

Indicator set: National Healthcare Agreement (2015)

Health, Superseded 08/07/2016

Outcome area: Primary and Community Health

Health, Standard 07/07/2010

Collection and usage attributes

Computation description: For ICD-10-AM coding details, please refer to the specification for National

Healthcare Agreement Performance Indicator 18 - Selected potentially preventable

hospitalisations, 2015 (/content/index.phtml/itemld/559032).

Analysis of state/territory is based on usual residence of the person.

Presented as a number and a percentage.

Computation: Number

100 × (Numerator ÷ Denominator)

Numerator: Number of potentially preventable hospitalisations, divided into three groups and

total:

• vaccine-preventable (e.g. tetanus, measles, mumps, rubella).

 acute conditions (e.g. ear, nose and throat infections, perforated/bleeding ulcer, pelvic inflammatory disease).

• chronic conditions (e.g. diabetes complications, asthma, angina, hypertension, congestive heart failure and chronic obstructive pulmonary

disease).

all potentially preventable hospitalisations.

Numerator data elements:

Comments:

Most recent data available for 2015 National Healthcare Agreement (NHA) performance reporting: 2012–13.

Baseline: 2006-07.

The scope of the National Hospital Morbidity Database (NHMD) is episodes of care for admitted patients in essentially all hospitals in Australia, including public and private acute and psychiatric hospitals, free-standing day hospital facilities, alcohol and drug treatment hospitals and dental hospitals.
