

Cancer treatment— chemotherapy cycles administered, number of cycles N[NN]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Chemotherapy cycles administered
METEOR identifier:	561248
Registration status:	<ul style="list-style-type: none">• Health, Standard 08/05/2014
Definition:	The total number of cycles of chemotherapy administered during the course of treatment for cancer.
Data Element Concept:	Cancer treatment—chemotherapy cycles administered

Value domain attributes

Representational attributes

Representation class:	Total								
Data type:	Number								
Format:	N[NN]								
Maximum character length:	3								
Supplementary values:	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>997</td><td>Not applicable-no chemotherapy was administered</td></tr><tr><td>998</td><td>Unknown whether chemotherapy was administered</td></tr><tr><td>999</td><td>Chemotherapy was administered but the number of cycles was not stated/inadequately described</td></tr></tbody></table>	Value	Meaning	997	Not applicable-no chemotherapy was administered	998	Unknown whether chemotherapy was administered	999	Chemotherapy was administered but the number of cycles was not stated/inadequately described
Value	Meaning								
997	Not applicable-no chemotherapy was administered								
998	Unknown whether chemotherapy was administered								
999	Chemotherapy was administered but the number of cycles was not stated/inadequately described								

Data element attributes

Collection and usage attributes

Guide for use:

Chemotherapy is a type of cancer treatment that achieves its antitumour effect through the use of antineoplastic drugs that inhibit the reproduction of cancer cells by interfering with DNA synthesis and mitosis.

Chemotherapy may be administered as single-agent treatment or as a combination of drugs administered according to a prespecified regimen or protocol.

The number of cycles of each course of single agent chemotherapy, regimen or protocol administered to the patient during the treatment of cancer should be recorded separately.

The number of cycles of chemotherapy received is recorded regardless of whether the course of treatment is completed as intended, and regardless of the intent or timing of the chemotherapy.

If any part of a cycle is administered but the cycle is not completed, record as one cycle.

Oral chemotherapy normally given on an outpatient basis should also be included.

The number of cycles of targeted therapies using a chemotherapy agent is included. Targeted therapies are treatments that use drugs or other substances to identify and attack specific cancer cells.

If a patient receives treatment with a protocol including both a chemotherapy agent and another systemic agent such as an immunotherapy or hormone therapy agent, record the number of cycles here.

Collection methods:

This information should be collected from the patient's medical record.

Comments:

The collection of specific treatment information is useful to evaluate patterns of care, the effectiveness of different treatment modalities, and treatment by patient outcome.
