Data element attributes

Collection and usage attributes

Guide for use: The surgical procedure date is collected for all cancer-directed surgery delivered to the patient during treatment for cancer.

Cancer-directed surgery refers to all surgery that destroys or modifies cancer tissue anywhere in the body.

Cancer-directed surgery may be palliative (to control symptoms, alleviate pain, or make the patient more comfortable), or curative.

The date of each surgical treatment episode should be entered separately.

Procedure dates for biopsies that remove all of the tumour and/or leave only microscopic margins are to be recorded here.

Dates for radiotherapy and systemic treatments are collected as separate items.

Collection methods: This information should be obtained from the patient's medical record.

Comments: Collecting the start and finish dates for treatment modalities will enable an estimate of treatment duration.
