Disease screening

Identifying and definitional attributes

Metadata item type: Glossary Item

METEOR identifier: 564029

Registration status: [Health](#), Standard 29/08/2014

Definition: Repeated testing, at regular intervals, of apparently well people to detect a medical condition at an earlier stage than would otherwise be the case.

Screening tests are not diagnostic; therefore, people who receive a positive screening result require further assessment and diagnosis to determine whether or not they have the disease or risk marker being screened for.
