Address—country identifier, country code (SACC 2011) NNNN

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Country identifier
METEOR identifier:	573213
Registration status:	Health , Superseded 06/12/2016
Definition:	The country component of an address, as represented by a code.
Data Element Concept:	Address—country identifier
Value Domain:	Country code (SACC 2011) NNNN

Value domain attributes

Representational attributes

Classification scheme:	Standard Australian Classification of Countries 2011
Representation class:	Code
Data type:	Number
Format:	NNNN
Maximum character length:	4

Collection and usage attributes

Guide for use:	<p>The Standard Australian Classification of Countries 2011 (SACC) is a four-digit, three-level hierarchical structure specifying major group, minor group and country.</p> <p>A country, even if it comprises other discrete political entities such as states, is treated as a single unit for all data domain purposes. Parts of a political entity are not included in different groups. Thus, Hawaii is included in Northern America (as part of the identified country United States of America), despite being geographically close to and having similar social and cultural characteristics as the units classified to Polynesia.</p>
