# Date of late effect

## Identifying and definitional attributes

**Metadata item type:** Property

**METEOR identifier:** 573431

**Registration status:** [Health](#), Standard 04/02/2015

**Definition:** The date on which a late effect appears after the acute stage of a disease or condition has resolved. This may be as a result of the treatment, the disease process, or both.

A late effect is a persistent complication, disability or adverse outcome that appears after the acute stage of a disease has resolved (excluding a recurrence or progression of disease). This may be as a result of the treatment, the disease process, or both. Examples of late effects include infertility, hyperthyroidism, fatigue, scoliosis and cognitive impairment.

## Relational attributes

**Data Element Concepts implementing this property:** [Person with cancer—date of late effect](#)  
[Health](#), Standard 04/02/2015
