Children's Global Assessment Scale score code N[NN]

Identifying and definitional attributes

Metadata item type:	Value Domain
METEOR identifier:	575050
Registration status:	Independent Hospital Pricing Authority , Standard 15/10/2014
Definition:	A code set representing the severity of disturbance in the functioning of a child or adolescent.

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N[NN]
Maximum character length:	3

	Value	Meaning
Supplementary values:	997	Unable to rate
	999	Not stated/missing

Collection and usage attributes

Guide for use:

The Children's Global Assessment Scale (CGAS) was developed to provide a measure of severity of disturbance in children and adolescents. It is designed to reflect the lowest level of functioning for a child or an adolescent during a specified period.

The measure provides a single global rating only, on a scale of 1 to 100. Clinicians assign a score, with 1 representing the most functionally impaired child, and 100 the healthiest child.

Scale ranges:

100-91	Superior functioning in all areas
90-81	Good functioning in all areas
80-71	No more than slight impairments in functioning
70-61	Some difficulty in a single area but generally functioning pretty well
60-51	Variable functioning with sporadic difficulties or symptoms in several but not all social areas
50-41	Moderate interference in functioning in most social areas or severe impairment of functioning in one area
40-31	Major impairment of functioning in several areas and unable to function in one of these areas
30-21	Unable to function in almost all areas
20-11	Needs considerable supervision
10-1	Needs constant supervision
