

Mental health restraint events cluster

Identifying and definitional attributes

Metadata item type: Data Set Specification

METEOR identifier: 579779

Registration status:

- [Health](#), Standard 13/11/2014

DSS type: Data Element Cluster

Scope: The data elements in the Mental health restraint events cluster are used in conjunction with each other to describe the [restraint](#) events experienced by [mental health consumers](#) during admission to specialised mental health public acute hospital units. They are collected together and reported as the number of restraint events occurring during the collection period against each reported type of restraint.

Collection and usage attributes

Guide for use: The Mental health restraint events cluster comprises two data elements that, in combination, describe the number of mechanical, physical and unspecified mechanical or physical restraint events experienced by mental health consumers during the collection period.

This is achieved by the combination of the two data elements: [Specialised mental health service—type of restraint event, code N](#) and [Specialised mental health service—number of restraint events, number NNNN](#).

The Mental health restraint events cluster describes the following information:

<i>Restraint type</i>	<i>Number</i>
Mechanical restraint	NNNN
Physical restraint	NNNN
Unspecified mechanical or physical restraint	NNNN

The reporting approach differs depending on whether the number of restraint events can be disaggregated by type of restraint:

- Data providers capable of disaggregating mechanical from physical restraint events should report figures for those categories and enter the supplementary code ('Not applicable', Code 9999) for the unspecified category. If one type of restraint is not employed by a service during the reference period, report 0 for that specific category.
- Data providers unable to disaggregate mechanical from physical restraint events should report a combined figure for unspecified mechanical or physical restraint, and enter the supplementary code ('Not applicable', Code 9999) for the specific categories.

Relational attributes

Implementation in Data Set Specifications:

[Mental health seclusion and restraint NBEDS 2015-Health](#), Standard 13/11/2014

Implementation start date: 01/07/2015

DSS specific information:

Data is limited to hospitals that provide [acute](#) specialised mental health public hospital services.

The data element [Specialised mental health service target population](#) should be used to distinguish between General, Child and adolescent, Youth, Older person and Forensic services for each hospital. Data records for this collection may therefore differ to the Admitted service unit records provided for the Mental health establishments NMDS.

Metadata items in this Data Set Specification

Seq No.	Metadata item	Obligation	Max occurs
-	Specialised mental health service—number of restraint events, total number N[NNN]	Mandatory	3
-	Specialised mental health service—type of restraint event, code N	Mandatory	3
