

Medical emergency team

Identifying and definitional attributes

Metadata item type: Glossary Item

METEOR identifier: 584962

Registration status:

- [Health](#), Standard 04/09/2015

Definition: A team, usually consisting of specially trained medical practitioners and specialist nurses, which possesses the required skills and equipment to provide a patient with immediate on-site stabilisation and management, and to start discussions on appropriate limitations to medical intervention if indicated (for example, implementation of a 'Do not attempt to resuscitate' or 'Not for resuscitation' order).

Context: Admitted patient care

Collection and usage attributes

Comments: The goal of the Medical Emergency Team (MET) is early recognition and response to change in a patient's condition, and to prevent further deterioration and to decide if enhanced levels of care are appropriate (for example, in the high-dependency or [intensive care units](#)).

Source and reference attributes

Submitting organisation: Australian Commission on Safety and Quality in Health Care/Australian Institute of Health and Welfare
