Indigenous primary health care: PI22b-Proportion of regular clients who have had a cervical screening, 2015

Exported from METEOR (AIHW's Metadata Online Registry)

Indigenous primary health care: PI22b-Proportion of regular clients who have had a cervical screening, 2015

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PI22b-Proportion of regular clients who have had a cervical screening, 2015
METEOR identifier:	589077
Registration status:	Health, Superseded 05/10/2016
	Indigenous, Superseded 20/01/2017
Description:	Proportion of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 2 years, 3 years and 5 years.
Rationale:	Cancer mortality rates are higher for Indigenous Australians than for other Australians. National organised programs for cervical screening in Australia have been followed by reductions in mortality rates for these cancers. A pap smear every two years can prevent the most common form of cervical cancer and is the best protection against cervical cancer.
Indicator set:	Indigenous primary health care key performance indicators (2015)
	Health, Superseded 05/10/2016
	Indigenous, Superseded 20/01/2017

Collection and usage attributes

Population group age from:	20 years
Population group age to:	69 years
Computation description:	Proportion of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 2 years, 3 years and 5 years.
	'Regular client' refers to a client of an OATSIH-funded primary health care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the OATSIH-funded primary health care service at least 3 times in 2 years.
	Presented as a percentage.
	Calculated separately for women who have had a cervical screening within the last 2 years, the last 3 years and the last 5 years.
Computation:	(Numerator ÷ Denominator) x 100
Numerator:	Calculation A: Number of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 2 years.
	Calculation B: Number of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 3 years.
	Calculation C: Number of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 5 years.
