Indigenous primary health care: Pl24a-Number of regular clients with Type II diabetes whose blood pressure measurement result was less than or equal to 130/80 mmHg, 2015

Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Output measure

Short name: Pl24a-Number of regular clients with Type II diabetes whose blood pressure

measurement result was less than or equal to 130/80 mmHg, 2015

METEOR identifier: 589083

Registration status: <u>Health,</u> Superseded 05/10/2016

Indigenous, Superseded 20/01/2017

Description: Number of regular clients who are Indigenous, have Type II diabetes and whose

blood pressure measurement result, recorded within the previous 6 months, was

less than or equal to 130/80 mmHg.

Rationale: The blood pressure target for people with Type II diabetes is less than or equal to

130/80 mmHg. This level is shown to significantly decrease macrovascular (stroke, heart attack and heart failure) and microvascular (kidney disease, eye disease and

peripheral neuropathy) complications.

Indigenous primary health care key performance indicators (2015)

<u>Health</u>, Superseded 05/10/2016 <u>Indigenous</u>, Superseded 20/01/2017

Collection and usage attributes

Computation description: Count of regular clients who are Indigenous, have Type II diabetes and whose blood

pressure measurement result, recorded within the previous 6 months, was less than

or equal to 130/80 mmHg.

'Regular client' refers to a client of an OATSIH-funded primary health care service (that is required to report against the Indigenous primary health care key

performance indicators) who has an active medical record; that is, a client who has

attended the OATSIH-funded primary health care service at least 3 times in 2

years

Exclude Type I diabetes, secondary diabetes, gestational diabetes mellitus (GDM),

previous GDM, impaired fasting glucose, impaired glucose tolerance.

The client does not have a blood pressure measurement of less than or equal to 130/80 mmHg if either the systolic or diastolic reading is above the threshold (130

and 80 respectively).

In the general population, blood pressure over 140/90 mmHg is considered high. The blood pressure target for those with Type II diabetes is less than or equal to 130/80 mmHg as it is shown to significantly decrease macrovascular (stroke, heart attack and heart failure) and microvascular (kidney disease, eye disease and

peripheral neuropathy) complications.

Presented as a number.

If the client has had more than one blood pressure measurement in the last 6 months, only the most recently recorded result is included in this calculation.

Computation: Numerator only

Numerator:

Number of regular clients who are Indigenous, have Type II diabetes and whose blood pressure measurement result, recorded within the previous 6 months, was less than or equal to 130/80 mmHg.
