Indigenous primary health care: Pl06a-Number of regular clients with Type II diabetes whose HbA1c measurement result was within a specified level, 2015

Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Output measure

Short name: Pl06a-Number of regular clients with Type II diabetes whose HbA1c measurement

result was within a specified level, 2015

METEOR identifier: 592153

Registration status: Health, Superseded 05/10/2016

Indigenous, Superseded 20/01/2017

Description: Number of regular clients who are Indigenous, have Type II diabetes

and whose HbA1c measurement result, recorded within either the previous 6

months or 12 months, was categorised as one of the following:

• less than or equal to 7% (less than or equal to 53 mmol/mol);

greater than 7% but less than or equal to 8% (greater than 53 mmol/mol but

less than or equal to 64 mmol/mol);

• greater than 8% but less than 10% (greater than 64 mmol/mol but less than

86 mmol/mol) or;

• greater than or equal to 10% (greater than or equal to 86 mmol/mol)

Rationale: Chronic diseases, such as diabetes, are a major cause of morbidity and mortality

among Aboriginal and Torres Strait Islander people. Monitoring glycosylated haemoglobin (HbA1c) levels plays a key role in the management of the disease.

Indigenous primary health care key performance indicators (2015)

<u>Health</u>, Superseded 05/10/2016 <u>Indigenous</u>, Superseded 20/01/2017

Collection and usage attributes

Computation description:

Count of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded within either the previous 6 months or 12 months, was categorised as one of the following:

- less than or equal to 7% (less than or equal to 53 mmol/mol);
- greater than 7% but less than or equal to 8% (greater than 53 mmol/mol but less than or equal to 64 mmol/mol);
- greater than 8% but less than 10% (greater than 64 mmol/mol but less than 86 mmol/mol) or;
- greater than or equal to 10% (greater than or equal to 86 mmol/mol)

'Regular client' refers to a client of an OATSIH-funded primary health care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the OATSIH-funded primary health care service at least 3 times in 2 years.

HbA1c: glycosylated haemoglobin.

Exclude Type I diabetes, secondary diabetes, gestational diabetes mellitus (GDM), previous GDM, impaired fasting glucose, impaired glucose tolerance.

Presented as a number.

Calculated separately for each HbA1c range, for each time period.

Include only the most recent HbA1c measurement result from each time period.

Numerator only

Calculation A: Number of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded in the previous 6 months, was less than or equal to 7% (less than or equal to 53 mmol/mol).

Calculation B: Number of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded in the previous 6 months, was greater than 7% but less than or equal to 8% (greater than 53 mmol/mol but less than or equal to 64 mmol/mol).

Calculation C: Number of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded in the previous 6 months, was greater than 8% but less than 10% (greater than 64 mmol/mol but less than 86 mmol/mol).

Calculation D: Number of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded in the previous 6 months, was greater than or equal to 10% (greater than or equal to 86 mmol/mol).

Calculation E: Number of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded in the previous 12 months, was less than or equal to 7% (less than or equal to 53 mmol/mol).

Calculation F: Number of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded in the previous 12 months, was greater than 7% but less than or equal to 8% (greater than 53 mmol/mol but less than or equal to 64 mmol/mol).

Calculation G: Number of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded in the previous 12 months, was greater than 8% but less than 10% (greater than 64 mmol/mol but less than 86 mmol/mol).

Calculation H: Number of regular clients who are Indigenous, have Type II diabetes and whose HbA1c measurement result, recorded in the previous 12 months, was greater than or equal to 10% (greater than or equal to 86 mmol/mol).
