

Address—address line, text X[X(179)]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Address line
METEOR identifier:	594217
Registration status:	<ul style="list-style-type: none">• Early Childhood, Standard 24/07/2018• Health, Standard 13/03/2015• Housing assistance, Standard 10/05/2019• Indigenous, Standard 13/03/2015
Definition:	A composite of one or more standard address components, as represented by text.
Data Element Concept:	Address—address line

Value domain attributes

Representational attributes

Representation class:	Text
Data type:	String
Format:	X[X(179)]
Maximum character length:	180

Data element attributes

Collection and usage attributes

Guide for use:

A high-level address component is defined as a broad geographical area that is capable of containing more than one specific physical location. Some examples of a broad geographical area are:

- Suburb, town or locality
- Postcode
- Australian or international
- State, Territory, local government area, electorate, statistical local area
- Postal delivery point identifier
- Countries, provinces, etc. other than in Australia.

These components of a complete address do not form part of the Address line. When addressing an Australian location, following are the standard address data elements that may be concatenated in the Address line:

- Building/complex sub-unit type
- Sub-dwelling unit number
- Address site name
- Level number
- Floor/level type
- Road number 1
- Lot number
- Road name
- Road type code
- Road suffix code.

One complete identification/description of a location/site of an address can comprise one or more than one instance of address line. Instances of address lines are commonly identified in electronic information systems as Address-line 1, Address-line 2, etc. The format of data collection is less important than consistent use of conventions in the recording of address data. Hence, address may be collected in an unstructured manner but should ideally be stored in a structured format. Where Address line is collected as a stand-alone item, software may be used to parse the Address line details to separate the sub-components. Multiple Address lines may be recorded as required.

Collection methods:

The following concatenation rules should be observed when collecting address lines addressing an Australian location:

- Building/complex sub-unit type is to be collected in conjunction with sub-dwelling unit number and vice versa.
- Floor/level type is to be collected in conjunction with Level number and vice versa.
- Road name is to be used in conjunction with Road type code and Road suffix code.
- Road type code is to be used in conjunction with Road name and Road suffix code.
- Road suffix code is to be used in conjunction with Road name and Road type code.
- Road number 1 is to be used in conjunction with Road name.
