Collection and usage attributes

Statistical unit:	Household , Person , Service event .
--------------------------	--

Collection methods:*National reporting arrangements*

State and territory housing authorities provide the data to the Australian Institute of Health and Welfare (AIHW) for national collection, on an annual basis.

Periods for which data are collected and nationally collated

The reference period starts on 1 July and ends on 30 June each financial year. The reference period for this collection is the financial year for which the data were collected: 2013-14, 2014-15 and so forth. Data collection for each HPA DSS reference period includes records of assistance to households that:

- commenced receiving assistance in the current reference period
- commenced receiving an ongoing form of assistance in a previous financial year and continued to receive this assistance in the current reference period
- received a repayable form of assistance in a previous financial year for which repayable monies remained outstanding at the commencement of the current reference period.

Data qualifications:

- A separate record should be reported for each type of assistance provided to a household.
- A single record should be reported for each type of ongoing assistance provided to a household in the reference period, regardless of which financial year assistance commenced.
- For households that had monies outstanding on repayable assistance provided in a previous financial year and received no new assistance in the current reference period, the amount of assistance should be left blank, but the type of assistance received, payment type, and date assistance received should be reported.

Implementation start date: 01/07/2013

Comments:

While approved as the national standard, some details are not presented in accordance with best practice standards for metadata published as national standards in METeOR. Improvements may be made to the presentation of the metadata in the future; however they will not affect the meaning of the metadata or the interpretation of data collected using the metadata.
