Comments:

Most recent data available for 2016 National Healthcare Agreement performance reporting: 2014–15.

Indicator procedures are a subset of all procedures, e.g. in 2007–08, approximately 65% of removals did not fall into one of the defined indicator procedures.

For 2013–14 data, the 2011 SEIFA IRSD quintile and decile data will be produced using the Australian Statistical Geography Standard geographical unit of Statistical Area Level 2.

The scope of the National Elective Surgery Waiting Times Data Collection is patients removed from waiting lists for elective surgery which are managed by public acute hospitals.

Note that previously for this indicator disaggregations by public hospital peer group were calculated using the peer group classification method as reported in *Australian hospital statistics 2010–11*.
