National Healthcare Agreement: PI 15—Effective management of diabetes, 2016

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Progress measure
Short name:	PI 15—Effective management of diabetes, 2016
METEOR identifier:	598752
Registration status:	Health , Superseded 31/01/2017
Description:	Proportion of people with known diabetes who have a HbA1c (glycated haemoglobin) level less than or equal to 7.0%
Indicator set:	National Healthcare Agreement (2016) Health , Superseded 31/01/2017
Outcome area:	Primary and Community Health Health , Standard 07/07/2010

Collection and usage attributes

Computation description: The National Health Measures Survey component of the 2011–12 Australian Health Survey included a fasting plasma glucose test and an HbA1c test. For this indicator, the fasting plasma glucose test is used in the determination of people with known diabetes and the HbA1c test is used in the determination of effective management of diabetes. Persons with known diabetes who have an HbA1c result of less than or equal to 7.0% are considered to be managing their diabetes effectively.

Known diabetes is defined as persons self-reporting that they had ever been told by a doctor or nurse that they have diabetes and:

- They were taking diabetes medication (either insulin or tablets); or
- Their blood test result for fasting plasma glucose was greater than or equal to 7.0 mmol/L.

Excludes persons who did not fast for 8 hours or more prior to their blood test.

Reported for persons aged between 18 and 69 years.

Excludes women with gestational diabetes.

Analysis by remoteness and Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socio-Economic Disadvantage (IRSD) is based on usual residence of person (subject to data availability).

Presented as a percentage.

95% confidence intervals and relative standard errors calculated for rates.

Computation: 100 x (numerator/denominator)

Numerator: Number of persons aged between 18 and 69 years with *known diabetes*, as determined by a fasting plasma glucose test, who have an HbA1c level of less than or equal to 7.0%.

Disaggregation:

State and territory, by:

- sex
- Indigenous status.

Nationally, by:

- remoteness (Australian Statistical Geography Standard (ASGS) Remoteness Structure)
- 2011 SEIFA IRSD
- age (18–44, 45–54, 55–64, 65–69).

Some disaggregation may result in numbers too small for publication.
