Service event—date of Medicare service, DDMMYYYY

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Medicare date of service

Synonymous names: Date of service

METEOR identifier: 603319

Registration status: Commonwealth Department of Health, Retired 19/10/2023

Definition: The date on which the <u>Medicare service provider</u> performed the Medicare

claimable service, expressed as DDMMYYYY.

Data Element Concept: Service event—date of Medicare service

Value Domain: <u>Date DDMMYYYY</u>

Value domain attributes

Representational attributes

Representation class: Date

Data type: Date/Time
Format: DDMMYYYY

Maximum character length: 8

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare

Data element attributes

Collection and usage attributes

Guide for use: The date of service is entered during claims processing and is mandatory for

processing patient claims.

Comments: The time lag between the date of service and the date of processing makes it

impossible to produce reliable statistics on services rendered in a given period until many months after the end of that period. A three to six months lag period between the service being rendered and the history being extracted is recommended to allow for potential delays before the claim is lodged and

processed.

98% of claims are processed within three months of the date of service and 99% of claims are processed within six months of the date of service. The average time between date of a medical service and processing of a Medicare claim is 15-16

days.
