Population group age	3 to 19 years
from:	20 to 44 years
	45 years and over

Computation description:

Presented as a number per 100,000 people, age standardised, by Statistical Area Level 3.

Analysis by Statistical Area Level 3 (SA3) is based on postcode of usual residence of the patient which is based on the patient's Medicare enrolment postcode on the date the prescription was dispensed.

SA3s where the total population was less than 2,500 or where the population of interest was less than 200 are excluded.

Suppression protocol for calculating age standardised rates:

	Numerator	Total prescriptions dispensed were less than 20 (unrounded data)
	Denominator	ERP for one or more five year age groups was less than 30
		tion group 3 to 19 years, the following age groups were used for e standardised rates: 3-9, 10-14, 15-19.
Computation:	100,000 x (Nur	merator ÷ Denominator), age standardised

	<ul> <li>Statistical Area Level 3 (SA3s) are geographic areas defined in the ABS Australian Statistical Geography Standard (ASGS). The aim of SA3s is to create a standard framework for the analysis of ABS data at the regional level through clustering groups of SA2s that have similar regional characteristics. There are 333 spatial SA3s covering the whole of Australia without gaps or overlaps. They are designed to provide a regional breakdown of Australia. SA3s generally have a population of between 30,000 and 130,000 people. There are approximately 50 with fewer than 30,000 people and 35 with more than 130,000 as at 30 June 2011. For further information see the ABS publication, Australian Statistical Geography Standard (ASGS): Volume 1 – Main Structure and Greater Capital City Statistical Areas, July 2011 (cat. no. 1270.0.55.001).</li> </ul>
