Transition from hospital care

Identifying and definitional attributes

Metadata item type:	Outcome Area
METEOR identifier:	624413
Registration status:	Health, Standard 12/09/2016
Description:	Before a patient with current or resolved delirium leaves hospital, the patient and their carer are involved in the development of an individualised care plan and are provided with information about delirium. The plan describes the ongoing care that the patient will require after they leave hospital, including a summary of any changes in medicines, strategies to help reduce the risk of delirium and prevent complications from it, and any other ongoing treatments. The plan is provided to the patient and their carer before discharge, and to their general practitioner or ongoing clinical provider within 48 hours of discharge.

Relational attributes
