

Survey—sample population

Metadata item type: Data Element Concept

METEOR identifier: 637102

Registration status:

- [Health](#), Standard 25/01/2018

Definition: The part of a population which is selected in a survey, for the purpose of studying characteristics of the entire population of interest.

Object Class attributes

Identifying and definitional attributes

Object class: [Survey](#)

Definition: The collection of information about characteristics of interest from some, or all, units of a population using well-defined concepts, methods and procedures.

Statistical surveys collect data to answer a question by placing a statistical value to an indicator or measure. Surveys measure one or more characteristics of the whole population or a sample of the population.
