## Collection and usage attributes

<b>Computation description:</b>	Determine the percentage of patients that are treated in turn by counting the numbers of patient with wait time longer than the lower surgical priority recommended time and dividing this by the count of all patients who were removed from the waiting list for a completed procedure. Divide the total sum of overdue (over boundary) days by the total count of overdue patients for the last 12 months to determine the Average overdue days.
<b>Computation:</b>	Numerator ÷ Denominator  Calculated a result for each region.
<b>Numerator:</b>	Count of the number of Category 2 patients who are admitted for surgery and who are treated within 90 days, but not before 31 days, from the time they are added to the wait list. A count of all patients with a completed procedure for Elective Surgery between the longest recommended wait time for their current priority and the longest (+1) of the next highest priority.
