Record run date

Identifying and definitional attributes

Metadata item type: Property
METEOR identifier: 658882

Registration status: Commonwealth Department of Health, Recorded 21/10/2016

Definition: The date on which the data record is extracted from a computer system.

The record run date essentially represents the date on which a data extraction

program or facility is executed.

Collection and usage attributes

Guide for use: The record run date should not be confused with other similar concepts such as the

record extraction date, which represents something akin to a processing date or a data finalisation date, i.e. the date on which a data record reaches a particular

status associated with its level of completeness or correctness.

For example, a data extraction program run on 20 October 2016 might explicitly specify the inclusion of all data records processed on 15 October 2016. In this case, the record run date would be 20 October 2016, while the record extraction

date would be 15 October 2016.
