<b>Definition:</b>	The Standard Australian Classification of Countries (SACC) is produced by the Australian Bureau of Statistics (ABS) and provides guidelines for the consistent collection, aggregation and dissemination of statistics by country.
<b>Classification structure:</b>	The SACC has a three-level hierarchical structure that consists of major groups, minor groups and countries. The major and minor groups of the classification generally represent geographically contiguous groups of countries or regions that share some social, cultural, economic or political characteristics.

## Collection and usage attributes

<b>Guide for use:</b>	<p>The ABS recommends all data be captured and stored at the most detailed level of the classification to enable more detailed and complex analysis, and facilitate comparisons with other data sets.</p> <p>Countries from different minor groups should not be added together to form an aggregation that is not included in the classification framework structure as this corrupts the application of the classification criteria and has repercussions for data comparability. Similarly, minor groups from different major groups should not be added together. In instances where some countries within a minor group are presented separately while the remaining countries within the minor group are aggregated, the group of aggregated countries should be labelled 'Other', or 'Other (minor group name)'.</p>
