Dwelling—geographic remoteness

Identifying and definitional attributes

Metadata item type:	Data Element Concept
METEOR identifier:	662963
Registration status:	Housing assistance , Superseded 10/05/2019
Definition:	The remoteness of a dwelling, based on the physical road distance to the nearest urban centre and its population size.

Object Class attributes

Identifying and definitional attributes

Object class:	Dwelling
METEOR identifier:	662863
Registration status:	Housing assistance , Standard 30/08/2017
Definition:	A structure or a discrete space within a structure intended for people to live in or where a person or group of people live.
Context:	Dwellings are the main statistical unit in the housing sector. Information on the number of occupied dwellings and tenantable and untenable vacancies in a dwelling is collected by housing providers for planning purposes. Dwellings may be owned, managed, and/or made available for use by a specific program, including head-leased stock from private and government sources. Dwellings include boarding house buildings and boarding house units .

Collection and usage attributes

Guide for use:	<p>A structure that people actually live in is a dwelling regardless of its intended purpose, but a vacant structure is only a dwelling if intended for human residence. A dwelling may include one or more rooms used as an office or workshop provided the dwelling is in residential use.</p> <p>Boarding house rooms or beds are not identified as separate dwellings unless they are self-contained. Self-contained rooms are therefore defined as units and are counted as a separate dwelling.</p> <p>For the public rental housing and state owned and managed Indigenous housing data collections, the number of tenancy (rental) units is used as a proxy for counting the number of dwellings.</p>

Property attributes

Identifying and definitional attributes

Property:	Geographic remoteness
METEOR identifier:	396537
Registration status:	Community Services (retired) , Standard 10/04/2013 Housing assistance , Standard 01/05/2013 Disability , Standard 13/08/2015 Health , Superseded 06/09/2018 Commonwealth Department of Health , Retired 19/10/2023

Definition: The remoteness of a location, based on the physical road distance to the nearest urban centre and its population size.

Context: Geographic remoteness is essentially a measure of a physical location's level of access to goods and services. Large population centres tend to have a greater range of goods and services available than small centres. Typically, a population centre is not likely to provide a full range of goods and services until its population reaches around 250,000 people.
