

# Dwelling—major redevelopment indicator

**Metadata item type:** Data Element Concept  
**METEOR identifier:** 662990  
**Registration status:**

- [Housing assistance](#), Standard 30/08/2017

**Definition:** An indicator of whether a dwelling has undergone major redevelopment to improve its condition or restore it to its former condition.

## Object Class attributes

### Identifying and definitional attributes

**Object class:** [Dwelling](#)  
**Definition:** A structure or a discrete space within a structure intended for people to live in or where a person or group of people live.  
**Context:** Dwellings are the main statistical unit in the housing sector. Information on the number of occupied dwellings and tenantable and untenable vacancies in a dwelling is collected by housing providers for planning purposes. Dwellings may be owned, managed, and/or made available for use by a specific program, including head-leased stock from [private](#) and [government](#) sources. Dwellings include [boarding house buildings](#) and [boarding house units](#).

### Collection and usage attributes

**Guide for use:** A structure that people actually live in is a dwelling regardless of its intended purpose, but a vacant structure is only a dwelling if intended for human residence. A dwelling may include one or more rooms used as an office or workshop provided the dwelling is in residential use.

[Boarding house rooms](#) or beds are not identified as separate dwellings unless they are self-contained. Self-contained rooms are therefore defined as units and are counted as a separate dwelling.

For the public rental housing and state owned and managed Indigenous housing data collections, the number of tenancy (rental) units is used as a proxy for counting the number of dwellings.
