

# Dwelling—tenantability indicator

<b>Metadata item type:</b>	Data Element Concept
<b>METEOR identifier:</b>	663112
<b>Registration status:</b>	<ul style="list-style-type: none"><li>• <a href="#">Housing assistance</a>, Standard 30/08/2017</li></ul>
<b>Definition:</b>	An indicator of whether an occupied or vacant dwelling is fit for occupation by a tenant.

## Object Class attributes

### Identifying and definitional attributes

<b>Object class:</b>	<a href="#">Dwelling</a>
<b>Definition:</b>	A structure or a discrete space within a structure intended for people to live in or where a person or group of people live.
<b>Context:</b>	Dwellings are the main statistical unit in the housing sector. Information on the number of occupied dwellings and tenantable and untenable vacancies in a dwelling is collected by housing providers for planning purposes. Dwellings may be owned, managed, and/or made available for use by a specific program, including head-leased stock from <a href="#">private</a> and <a href="#">government</a> sources. Dwellings include <a href="#">boarding house buildings</a> and <a href="#">boarding house units</a> .

### Collection and usage attributes

<b>Guide for use:</b>	<p>A structure that people actually live in is a dwelling regardless of its intended purpose, but a vacant structure is only a dwelling if intended for human residence. A dwelling may include one or more rooms used as an office or workshop provided the dwelling is in residential use.</p> <p><a href="#">Boarding house rooms</a> or beds are not identified as separate dwellings unless they are self-contained. Self-contained rooms are therefore defined as units and are counted as a separate dwelling.</p> <p>For the public rental housing and state owned and managed Indigenous housing data collections, the number of tenancy (rental) units is used as a proxy for counting the number of dwellings.</p>
