Indigenous primary health care: PI22a-Number of regular clients who have had a cervical screening, 2015-2017

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Output measure
Short name:	PI22a-Number of regular clients who have had a cervical screening, 2015-2017
METEOR identifier:	663982
Registration status:	Health, Superseded 25/01/2018 Indigenous, Superseded 27/02/2018
Description:	Number of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 2 years, 3 years and 5 years.
Rationale:	Cancer mortality rates are higher for Indigenous Australians than for other Australians. National organised programs for cervical screening in Australia have been followed by reductions in mortality rates for these cancers. A cervical screening every two years can prevent the most common form of cervical cancer and is the best protection against cervical cancer.
Indicator set:	Indigenous primary health care key performance indicators (2015-2017) Health, Superseded 25/01/2018 Indigenous, Superseded 27/02/2018

Collection and usage attributes

Population group age from:	20 years
Population group age to:	69 years
Computation description:	Count of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 2 years, 3 years and 5 years. 'Regular client' refers to a client of an Australian Government Department of Health-funded primary health care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary health care service at least 3 times in 2 years. Presented as a number. Calculated separately for women who have had a cervical screening within the previous 2 years, the previous 3 years and the previous 5 years.
Computation:	Numerator only.
Numerator:	Calculation A: Number of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 2 years. Calculation B: Number of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 3 years. Calculation C: Number of regular clients who are Indigenous, aged 20 to 69 years, who have not had a hysterectomy and who have had a cervical screening within the previous 5 years.
