Record—identifier, X[X(79)]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Record identifier (80 character maximum)
Synonymous names:	State record identifier
METEOR identifier:	679557
Registration status:	Health , Standard 25/01/2018
Definition:	A logical combination of alphanumeric characters that uniquely identifies a record.
Data Element Concept:	Record—identifier
Value Domain:	Identifier X[X(79)]

Value domain attributes

Representational attributes

Representation class:	Identifier
Data type:	String
Format:	X[X(79)]
Maximum character length:	80

Data element attributes

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare

Implementation in Data Set Specifications:	Activity based funding: Non-admitted patient NBEDS 2018-19 Independent Hospital Pricing Authority , Superseded 30/06/2019 Implementation start date: 01/07/2018 Implementation end date: 30/06/2019 DSS specific information:

In the context of the ABF NAP NBEDS, the Record identifier data element exists to aid with data processing. This data element is generated for inclusion in data submissions to facilitate referencing of specific records in discussions between the receiving agency and the reporting body. It is to be used solely for this purpose.

When stipulated in a data set, each record in a data submission will be assigned a unique numeric or alphanumeric record identifier to permit easy referencing of individual records in discussions between the receiving agency and the reporting body. The unique record identifier assigned by the reporting body should be generated in a fashion that allows the associated data record to be traced to its original form in the reporting body's source database.

Reporting jurisdictions may use their own alphabetic, numeric or alphanumeric coding system.

This field cannot be left blank.
