Birth event—additional indication for induction of labour

Identifying and definitional attributes

Metadata item type:	Data Element Concept
METEOR identifier:	680233
Registration status:	Health , Superseded 12/12/2018
Definition:	An additional indication for an induction being performed to commence a birth event.

Object Class attributes

Identifying and definitional attributes

Object class:	Birth event
Definition:	The sequence of actions by which a baby and the afterbirth (placenta) are expelled or extracted from the uterus at childbirth. The process usually starts spontaneously about 280 days after conception with onset of labour, but it may be started by artificial means.
Specialisation of:	Life event

Property attributes

Identifying and definitional attributes

Property:	Additional indication for induction of labour
Definition:	An indication for an induction being performed to initiate labour in a pregnant female, that is secondary to the main indication but which contributes to the clinician's decision to induce. Induction of labour is the initiation of labour by artificial means prior to its spontaneous onset. Methods of inducing labour include both pharmacological medication and mechanical or physical approaches. Induction may be recommended for a number of reasons to protect the health of mother and baby.
Property group:	Birth event
