# Episode of care—additional diagnosis, code (ICD-10-AM 10th edn) ANN{.N[N]}

## Identifying and definitional attributes

Metadata item type: Data Element

**Short name:** Additional diagnosis

METEOR identifier: 680973

Registration status: Health, Superseded 12/12/2018

Tasmanian Health, Superseded 08/04/2019

**Definition:** A condition or complaint either coexisting with the principal diagnosis or arising

during the episode of admitted patient care, episode of residential care or attendance at a health-care establishment, as represented by a code.

Data Element Concept: Episode of care—additional diagnosis

Value Domain: Diagnosis code (ICD-10-AM 10th edn) ANN{.N[N]}

#### Value domain attributes

### Representational attributes

Classification scheme: International Statistical Classification of Diseases and Related Health

Problems, Tenth Revision, Australian Modification 10th edition

Representation class: Code

Data type: String

Format: ANN{.N[N]}

Maximum character length: 6

#### Data element attributes

# Collection and usage attributes

Guide for use: Record each additional diagnosis relevant to the episode of care in accordance

with the International statistical classification of diseases and related health problems, 10th revision, Australian modification (ICD-10-AM) Australian Coding Standards. Generally, external cause, place of occurrence and activity codes will be included in the string of additional diagnosis codes. In some data collections these

codes may also be copied into specific fields.

The diagnosis can include a disease, condition, injury, poisoning, sign, symptom,

abnormal finding, complaint, or other factor influencing health status. \\

Additional diagnoses give information on the conditions that are significant in terms of treatment required, investigations needed and resources used during the episode of care. They are used for casemix analyses relating to severity of illness and for correct classification of patients into Australian Refined Diagnosis Related

Groups (AR-DRGs).

**Collection methods:** An additional diagnosis should be recorded and coded where appropriate upon

separation of an episode of admitted patient care or the end of an episode of residential care or attendance at a health-care establishment. The additional diagnosis is derived from and must be substantiated by clinical documentation.

#### Comments:

Additional diagnoses should be interpreted as conditions that affect patient management in terms of requiring any of the following:

- · commencement, alteration or adjustment of therapeutic treatment
- diagnostic procedures
- · increased clinical care and/or monitoring

In accordance with the Australian Coding Standards, certain conditions that do not meet the above criteria may also be recorded as additional diagnoses.

Additional diagnoses are significant for the allocation of AR-DRGs. The allocation of a patient to major problem or complication and co-morbidity Diagnosis Related Groups is made on the basis of the presence of certain specified additional diagnoses. Additional diagnoses should be recorded when relevant to the patient's episode of care and not restricted by the number of fields on the morbidity form or computer screen.

External cause codes, although not diagnosis of condition codes, should be sequenced together with the additional diagnosis codes so that meaning is given to the data for use in injury surveillance and other monitoring activities.

# **Specifications:**

Implementation in Data Set Activity based funding: Mental health care NBEDS 2018-19 Health, Superseded 12/12/2018

Implementation start date: 01/07/2018 Implementation end date: 30/06/2019

Conditional obligation:

This data element is only required to be reported for patients with an admitted or residential mental health episode of care.

Admitted patient care NMDS 2018-19

Health, Superseded 12/12/2018

Implementation start date: 01/07/2018 Implementation end date: 30/06/2019

Conditional obligation:

This data element is only to be reported if the episode of care results in more than one diagnosis code being allocated.

#### DSS specific information:

An unlimited number of diagnosis and procedure codes should be able to be collected in hospital morbidity systems. Where this is not possible, a minimum of 20 codes should be able to be collected.

#### Residential mental health care NMDS 2018-19

Health, Superseded 12/12/2018 Implementation start date: 01/07/2018 Implementation end date: 30/06/2019
