Episode of admitted patient care—primary impairment type, code (AROC 2012) NN.NNNN

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Primary impairment type (AROC)

METEOR identifier: 681412

Registration status: Health, Superseded 06/12/2023

Tasmanian Health, Standard 19/01/2018

Definition: The impairment which is the primary reason for the admission to an episode of

care, as represented by a code.

Data Element Concept: Episode of admitted patient care—primary impairment type

Value Domain: lmpairment-type-code (AROC 2012) NN.NNNN

Value domain attributes

Representational attributes

Classification scheme: Impairment type code (AROC 2012)

Representation class: Code

Data type: String

Format: NN.NNNN

Maximum character length: 7

Source and reference attributes

Submitting organisation: Independent Hospital Pricing Authority

Data element attributes

Collection and usage attributes

Comments: In the Australian National Subacute and Nonlacute Patient Classification (AN-

SNAP) version 4 User Manual (Green et. al. 2015), the paediatric rehabilitation branch uses impairment codes to group episodes to a specific class. The paediatric impairment codes consist of groups of specific impairment codes that are currently used. For paediatric rehabilitation episodes, use an existing impairment code which most closely describes the paediatric impairment.
