# Indigenous primary health care: Pl02b-Proportion of Indigenous babies born within the previous 12 months whose birthweight results were low, normal or high, 2015-2017

## Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

**Short name:** Pl02b-Proportion of Indigenous babies born within the previous 12 months whose

birthweight results were low, normal or high, 2015-2017

METEOR identifier: 686348

**Registration status:** <u>Health,</u> Superseded 17/10/2018

Indigenous, Superseded 17/10/2018

**Description:** Proportion of Indigenous babies born within the previous 12 months whose

birthweight results were categorised as one of the following:

• Low (less than 2,500 grams)

• Normal (2,500 grams to less than 4,500 grams)

• High (4,500 grams and over).

Rationale: Low birthweight (newborn babies weighing less than 2,500 grams) is associated

with an increased risk of ill health and is related to higher mortality within the first

year of life. Low birthweight is a particular issue for Indigenous

Australians. Recording birth weight encourages the provision of appropriate care

to limit the negative associations of low birthweight.

Indicator set: Indigenous primary health care key performance indicators (2015-2017)

Health, Superseded 17/10/2018 Indigenous, Superseded 17/10/2018

# Collection and usage attributes

Computation description: Proportion of Indigenous babies born within the previous 12 months whose

birthweight results were categorised as one of the following:

• Low (less than 2,500 grams)

Normal (2,500 grams to less than 4,500 grams)

• High (4,500 grams and over).

Birthweight is defined as the first weight of a baby obtained after birth.

Presented as a percentage.

Calculated separately for each weight range.

Excludes multiple births and stillbirths. Births that are at least 20 weeks gestation or

at least 400 grams birthweight are included.

Excludes unknown birthweight and unknown gestational age.

'Previous 12 months' refers to the previous financial year or previous calendar year.

**Computation:** (Numerator ÷ Denominator) x 100

### **Numerator:**

Calculation A: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care service with a result categorised as low (less than 2,500 grams).

Calculation B: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care service with a result categorised as normal (2,500 grams to less than 4,500 grams).

Calculation C: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care service with a result categorised as high (4,500 grams and over).

### Numerator data elements:

## Data Element / Data Set-

Birth—birth status, code N

**Data Source** 

Indigenous primary health care data collection

NMDS / DSS

Indigenous primary health care NBEDS 2017-18

Guide for use

Only live births are included.

## Data Element / Data Set

Birth—birth weight, code N

**Data Source** 

Indigenous primary health care data collection

NMDS / DSS

Indigenous primary health care NBEDS 2017–18

## Data Element / Data Set

Birth event—birth plurality, code N

**Data Source** 

Indigenous primary health care data collection

NMDS / DSS

Indigenous primary health care NBEDS 2017–18

Guide for use

Only singleton births are included.

## Data Element / Data Set-

Person-Indigenous status, code N

**Data Source** 

Indigenous primary health care data collection

NMDS / DSS

Indigenous primary health care NBEDS 2017-18

Guide for use

The baby is considered Indigenous if one or both parents identify as Indigenous.

The implementation start date for this data element in the Indigenous primary health care NBEDS 2017-18 is 1 December 2017.

**Denominator:** 

Calculation A, B and C: Total number of Indigenous babies born within the previous 12 months whose birthweight has been recorded at the primary health-care service.
