Indigenous primary health care: PI16b-Proportion of regular clients whose alcohol consumption status has been recorded, 2015-2017

Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: PI16b-Proportion of regular clients whose alcohol consumption status has been

recorded, 2015-2017

METEOR identifier: 686399

Registration status: <u>Health,</u> Superseded 17/10/2018

Indigenous, Superseded 17/10/2018

Description: Proportion of regular clients who are Indigenous, aged 15 years and over and who

have had their alcohol consumption status recorded at the primary health care

service within the previous 24 months.

Rationale: It is important to collect information on alcohol consumption because excessive

consumption is associated with health and social problems in all populations,

including the Indigenous population.

Indigenous primary health care key performance indicators (2015-2017)

<u>Health</u>, Superseded 17/10/2018 <u>Indigenous</u>, Superseded 17/10/2018

Collection and usage attributes

Population group age

from:

15 years

Computation description: Proportion of regular clients who are Indigenous, aged 15 years and over and who

have had their alcohol consumption status recorded at the primary health care

service within the previous 24 months.

'Regular client' refers to a client of an Australian Government Department of Healthfunded primary health care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary health

care service at least 3 times in 2 years.

Alcohol consumption status has been recorded if the health service has either:

a) A record of whether the client consumes alcohol or;

b) A record specifying the amount and frequency of the client's alcohol consumption

Results arising from measurements conducted outside of the service, that are known by the service, are included in the calculation of this indicator.

Operationalisation of alcohol consumption status:

Where an Indigenous regular client's alcohol consumption status does not have an assessment date assigned within the Patient Information Record System (PIRS), alcohol consumption status as recorded in the PIRS should be treated as current (i.e. as having been updated within the previous 24 months).

(i.e. as naving been updated within the previous 24 months).

Presented as a percentage.

Computation: (Numerator ÷ Denominator) x 100

Numerator: Number of regular clients who are Indigenous, aged 15 years and over and who

have had their alcohol consumption status recorded at the primary health care

service within the previous 24 months.
