

Indigenous primary health care: PI12b-Proportion of regular clients who are classified as overweight or obese, 2015-2017

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PI12b-Proportion of regular clients who are classified as overweight or obese, 2015-2017
METEOR identifier:	686470
Registration status:	<ul style="list-style-type: none">• Health, Superseded 17/10/2018• Indigenous, Superseded 17/10/2018
Description:	Proportion of regular clients who are Indigenous, aged 25 years and over and who have had their BMI classified as overweight or obese within the previous 24 months.
Rationale:	Obesity is closely associated with risk factors for the main causes of morbidity and mortality among Aboriginal and Torres Strait Islander people.
Indicator set:	Indigenous primary health care key performance indicators (2015-2017) Health , Superseded 17/10/2018 Indigenous , Superseded 17/10/2018

Collection and usage attributes

Population group age from:	25 years
Computation description:	<p>Proportion of regular clients who are Indigenous, aged 25 years and over and who have had their BMI classified as overweight or obese within the previous 24 months.</p> <p>'Regular client' refers to a client of an Australian Government Department of Health-funded primary health care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary health care service at least 3 times in 2 years.</p> <p>Body mass index (BMI): A measure of an adult's weight (body mass) relative to height used to assess the extent of weight deficit or excess where height and weight have been measured. Body mass index is the weight in kilograms divided by the square of the height in metres (WHO 2000).</p> <p>Presented as a percentage.</p> <p>Calculated separately for the overweight and obese classifications.</p> <p>If the client has had their BMI recorded more than once within the previous 24 months, only the most recently recorded result is included in this calculation.</p> <p>Only include those client's whose BMI was classified using a height measurement taken since the client turned 25 and a weight measurement taken within the previous 24 months.</p>
Computation:	$(\text{Numerator} \div \text{Denominator}) \times 100$

Numerator:

Calculation A: Number of regular clients who are Indigenous, aged 25 years and over and who have had their BMI classified as overweight within the previous 24 months.

Calculation B: Number of regular clients who are Indigenous, aged 25 years and over and who have had their BMI classified as obese within the previous 24 months.

Numerator data elements:
