

Indigenous primary health care: PI01b-Proportion of Indigenous babies born within the previous 12 months whose birthweight has been recorded, 2018-2019

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PI01b-Proportion of Indigenous babies born within the previous 12 months whose birthweight has been recorded, 2018-2019
METEOR identifier:	687918
Registration status:	<ul style="list-style-type: none">• Health, Superseded 16/01/2020• Indigenous, Superseded 14/07/2021
Description:	Proportion of Indigenous babies born within the previous 12 months whose birthweight has been recorded at the primary health-care service.
Rationale:	Low birthweight (newborn babies weighing less than 2,500 grams) is associated with an increased risk of ill health and is related to a higher mortality within the first year of life. Low birthweight is a particular issue for Indigenous Australians. Recording birthweight encourages the provision of appropriate care to limit the negative associations of low birthweight.
Indicator set:	Indigenous primary health care key performance indicators 2018-2019 Health , Superseded 16/01/2020 Indigenous , Superseded 14/07/2021

Collection and usage attributes

Computation description:	<p>Proportion of Indigenous babies born within the previous 12 months whose birthweight has been recorded at the primary health-care service.</p> <p>Birthweight is defined as the first weight of a baby obtained after birth.</p> <p>Only live births are included.</p> <p>Results arising from measurements conducted outside of the service, that are known by the service, are included in the calculation of this indicator.</p> <p>Presented as a percentage.</p> <p>'Previous 12 months' refers to the previous financial year or previous calendar year.</p>
Computation:	$(\text{Numerator} \div \text{Denominator}) \times 100$
Numerator:	Number of Indigenous babies born within the previous 12 months whose birthweight has been recorded at the primary health-care service.
