Indigenous primary health care: Pl08b-Proportion of regular clients with a chronic disease for whom a Team Care Arrangement (MBS Item 723) was claimed, 2018-2019

Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: Pl08b-Proportion of regular clients with a chronic disease for whom a Team Care

Arrangement (MBS Item 723) was claimed, 2018-2019

METEOR identifier: 687954

Registration status: <u>Health</u>, Superseded 16/01/2020

Indigenous, Superseded 14/07/2021

Description: Proportion of regular clients who are Indigenous, have a chronic disease and for

whom a Team Care Arrangement (MBS Item 723) was claimed within the previous

24 months.

Rationale: Effective management of chronic disease can delay the progression of disease,

decrease the need for high-cost interventions, improve quality of life, and increase life expectancy. As good quality care for people with chronic disease can involve multiple health-care providers across multiple settings, the development of multidisciplinary care plans is one way in which the client and primary health-care

provider can ensure appropriate care is arranged and coordinated.

Indigenous primary health care key performance indicators 2018-2019

<u>Health</u>, Superseded 16/01/2020 <u>Indigenous</u>, Superseded 14/07/2021

Collection and usage attributes

Computation description:

Proportion of regular clients who are Indigenous, have a chronic disease and for whom a Team Care Arrangement (MBS Item 723) was claimed within the previous 24 months.

'Regular client' refers to a client of an Australian Government Department of Healthfunded primary health-care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary healthcare service at least 3 times in 2 years.

Team Care Arrangement (MBS Item 723): The Chronic Disease Management (CDM) Medicare items on the Medicare Benefits Schedule (MBS) enable GPs to plan and coordinate the health care of patients with chronic or terminal medical conditions, including patients with these conditions who require multidisciplinary, team-based care from a GP and at least two other health or care providers (DoH 2016). Team Care Arrangements, for the purpose of this indicator, are defined in the MBS (Item 723).

Services taking part in the Health Care Homes Trial: For the duration of the Health Care Homes trial (currently 1 October 2017 to 30 November 2019), clients who are part of the trial will be deemed to have had an MBS Item 723 claimed if there is evidence of a Team Care Arrangement recorded.

Presented as a percentage.

Calculated separately for each chronic disease type:

a) Type II diabetes

Exclude Type I diabetes, secondary diabetes, gestational diabetes mellitus (GDM), previous GDM, impaired fasting glucose, impaired glucose tolerance.

- b) Cardiovascular disease
- c) Chronic obstructive pulmonary disease
- d) Chronic kidney disease

At this stage, this indicator is only calculated for **Type II diabetes** as currently this is the only relevant chronic disease type with an agreed national definition.

Computation:

(Numerator ÷ Denominator) x 100

Numerator:

Calculation A: Number of regular clients who are Indigenous, have Type II diabetes and for whom a Team Care Arrangement (MBS Item 723) was claimed within the previous 24 months.

Numerator data elements:
