# National Bowel Cancer Screening Program: Pl 03-Diagnostic assessment rate

## Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: National Bowel Cancer Screening Program diagnostic assessment rate

**Synonymous names:** NBCSP diagnostic assessment rate

METEOR identifier: 694162

**Registration status:** <u>Health,</u> Standard 06/09/2018

**Description:** The proportion of people who returned a positive National Bowel Cancer Screening

Program (NBCSP) screening test in a <u>defined 12-month period</u>, and had a follow-up <u>diagnostic assessment</u>, measured 12 months after the defined period.

Rationale: The appropriate movement of people from participation to diagnostic assessment

is a key indicator of the efficiency and the impact of the program in reducing

morbidity and mortality from colorectal cancer.

While not all participants with a positive screen will necessarily undergo

assessment, according to the Population Based Screening Framework (APHDPC

2008), systems should be in place to ensure timely follow-up to diagnostic

assessment for individuals with a positive screening test.

Assessment services should be managed in a way that provides equity of access to the relevant assessment services regardless of geographic location, ethnicity or socioeconomic status. Annual monitoring of the diagnostic assessment rate by various stratifications may reveal emerging positive or negative trends that need to

be investigated and rectified if necessary.

To reduce the effect of any lag time between invitation, positive screen and

diagnostic assessment, this indicator includes all those with a positive screen in the

defined period, not all those invited in the defined period.

Indicator set: National Bowel Cancer Screening Program performance indicators 2019—

Health, Standard 06/09/2018

## Collection and usage attributes

**Computation:** 100 x (Numerator ÷ Denominator)

**Numerator:** The number of people who received a positive NBCSP screen in a <u>defined 12-</u>

month period and had a follow-up assessment within the defined periodor the

following 12 months.

#### Numerator data elements:

Data Element / Data Set

Person—person identifier, X[X(19)]

#### Disaggregation:

Items will be presented by sex and age group, by:

- State and territory
- Socioeconomic status
- Remoteness area
- Indigenous status
- Main language spoken at home
- · Disability status
- Diagnostic assessment type
- · Patient election status

Some disaggregation may result in numbers too small for publication.
