# Pregnancy—birth plurality

## Identifying and definitional attributes

<b>Metadata item type:</b>	Data Element Concept
<b>METEOR identifier:</b>	695301
<b>Registration status:</b>	<a href="#">Health</a> , Standard 12/12/2018 <a href="#">Indigenous</a> , Standard 02/04/2019
<b>Definition:</b>	The number of births resulting from a single pregnancy.
<b>Context:</b>	Perinatal

## Object Class attributes

### Identifying and definitional attributes

<b>Object class:</b>	<a href="#">Pregnancy</a>
<b>Definition:</b>	The period during which a woman carries a developing fetus, normally in the uterus. Pregnancy lasts for approximately 266 days, from conception until the baby is born, or 280 days from the first day of the last menstrual period. During pregnancy menstruation is absent, there may be a great increase in appetite, and the breasts increase in size; the woman may also experience morning sickness. These and other changes brought about by a hormone (progesterone) produced at first by the ovary and later by the placenta. Definite evidence of pregnancy is provided by various pregnancy tests, by the detection of the heartbeat of the fetus, and by ultrasound.
<b>Specialisation of:</b>	<a href="#">Life event</a>
