Birth event—labour induction method, code N[N]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Labour induction method
Synonymous names:	Method of labour induction
METEOR identifier:	695355
Registration status:	Health , Superseded 03/12/2020
Definition:	The method used to induce labour in a birth event, as represented by a code.
Context:	Perinatal
Data Element Concept:	Birth event—labour induction method
Value Domain:	Labour induction code N[N]

Value domain attributes

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N[N]
Maximum character length:	2

	Value	Meaning
Permissible values:	1	Oxytocin
	2	Prostaglandins
	3	Artificial rupture of membranes (ARM)
	6	Mechanical cervical dilatation
	7	Antiprogesterone
	88	Other
Supplementary values:	99	Not stated/inadequately described

Collection and usage attributes

Guide for use:	CODE 6 Mechanical cervical dilatation An example of this induction method is the use of a cervical ripening balloon catheter. CODE 7 Antiprogesterone Also known as antiprogesterone or antiprogesterin.
Comments:	Code 4 has been omitted as it is no longer in use. For information about its meaning in previous data elements, see superseded versions. Code 5 has been omitted as it is no longer in use.

Source and reference attributes

Submitting organisation:	National Perinatal Data Development Committee
---------------------------------	---

Data element attributes

Collection and usage attributes

Guide for use:	All methods of labour induction used should be recorded. Therefore, more than one permissible value may be recorded for this data element. Each method should be recorded once only.
Comments:	The method of induction determines the progress and duration of labour and may influence the method of birth and the health status of the baby at birth.
