

Birth status code N

Identifying and definitional attributes

Metadata item type:	Value Domain
METEOR identifier:	695434
Registration status:	<ul style="list-style-type: none">• Health, Superseded 03/12/2020• Indigenous, Superseded 14/07/2021• Tasmanian Health, Standard 24/06/2020
Definition:	A code set representing status at birth.

Representational attributes

Representation class:	Code						
Data type:	Number						
Format:	N						
Maximum character length:	1						
Permissible values:	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>Live birth</td></tr><tr><td>2</td><td>Stillbirth (fetal death)</td></tr></tbody></table>	Value	Meaning	1	Live birth	2	Stillbirth (fetal death)
Value	Meaning						
1	Live birth						
2	Stillbirth (fetal death)						
Supplementary values:	9 Not stated/inadequately described						

Collection and usage attributes

Guide for use: CODE 1 Live birth

Live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of the pregnancy which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached; each product of such a birth is considered liveborn (WHO 2004).

CODE 2 Stillbirth (fetal death)

Stillbirth is a fetal death prior to the complete expulsion or extraction from its mother of a product of conception of 20 or more completed weeks of gestation or of 400 grams or more [birthweight](#); the death is indicated by the fact that after such separation the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. This is the same as the WHO definition of fetal death, except that there are no limits of gestational age or birthweight in the WHO definition (WHO 2004).
