Product of birth—birth status, code N

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Status of the baby

METEOR identifier: 695437

Registration status: Health, Superseded 03/12/2020

Indigenous, Superseded 14/07/2021

Tasmanian Health, Superseded 24/03/2023

Definition: The status of a baby at birth, as represented by a code.

Context: Perinatal

Data Element Concept: Product of birth—birth status

Value Domain: Birth status code N

Value domain attributes

Representational attributes

Representation class: Code

Data type: Number

Format: N Maximum character length: 1

Value Meaning

Permissible values: 1 Live birth

2 Stillbirth (fetal death)

Supplementary values: 9 Not stated/inadequately described

Collection and usage attributes

Guide for use: CODE 1 Live birth

Live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of the pregnancy which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached; each product of such a birth is considered liveborn (WHO 2004).

CODE 2 Stillbirth (fetal death)

Stillbirth is a fetal death prior to the complete expulsion or extraction from its mother of a product of conception of 20 or more completed weeks of gestation or of 400 grams or more **birthweight**; the death is indicated by the fact that after such separation the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. This is the same as the WHO definition of fetal death, except that there are no limits of gestational age or birthweight in the WHO definition (WHO 2004).
