Birth event—additional indication for induction of labour

Identifying and definitional attributes

Metadata item type: Data Element Concept

METEOR identifier: 695705

Registration status: Health, Standard 12/12/2018

Definition: An additional indication for an induction of labour being performed to commence a

birth event.

Object Class attributes

Identifying and definitional attributes

Object class: Birth event

Definition: The sequence of actions by which a baby and the placenta are expelled or

extracted from the female's uterus at childbirth. The process usually starts spontaneously about 280 days after conception with onset of labour, but it may be started by artificial means. The process ends upon complete expulsion or

extraction of the baby and the placenta.

University Press.

Property attributes

Identifying and definitional attributes

Property: Additional indication for induction of labour

Definition: An indication for an induction being performed to initiate labour in a pregnant

female, that is secondary to the main indication but which contributes to the

clinician's decision to induce.

Induction of labour is the initiation of labour by artificial means prior to its spontaneous onset. Methods of inducing labour include both pharmacological

medication and mechanical or physical approaches.

Induction may be recommended for a number of reasons to protect the health of

mother and baby.

Property group: Birth event
