Female—parity, total pregnancies N[N]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Parity
METEOR identifier:	696262
Registration status:	Health , Superseded 03/12/2020 Tasmanian Health , Superseded 11/06/2021
Definition:	The total number of previous pregnancies experienced by a female that have resulted in a live birth or a stillbirth .
Context:	Perinatal
Data Element Concept:	Female—parity
Value Domain:	Total pregnancies N[N]

Value domain attributes

Representational attributes

Representation class:	Total	
Data type:	Number	
Format:	N[N]	
Maximum character length:	2	
	Value	Meaning
Supplementary values:	99	Not stated
Unit of measure:	Pregnancy	

Data element attributes

Collection and usage attributes

Guide for use:	<p>To calculate parity, count all previous pregnancies that resulted in a live birth or a stillbirth of at least 20 weeks gestation or at least 400 grams birthweight. Excluded from the count are:</p> <ul style="list-style-type: none">• the current pregnancy• pregnancies resulting in spontaneous or induced abortions before 20 weeks gestation• ectopic pregnancies. <p>A primipara (a female giving birth for the first time) has a parity of 0.</p>
Collection methods:	A pregnancy with multiple fetuses is counted as one pregnancy.
Comments:	The number of previous pregnancies that resulted in a birth is an important component of the female's reproductive history. Parity may be a risk factor for adverse maternal and perinatal outcomes.

Source and reference attributes
