Person—type of chronic condition, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Type of chronic condition
METEOR identifier:	698700
Registration status:	Health , Superseded 29/05/2024
Definition:	The type of chronic condition from which a person suffers, as represented by a code.
Data Element Concept:	Person—type of chronic condition
Value Domain:	Type of chronic condition code N

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	
Permissible values:	Value	Meaning
	1	Asthma
	2	Cancer
	3	Cardiovascular disease
	4	Arthritis
	5	Diabetes

Collection and usage attributes

Guide for use:**CODE 1 Asthma**

A chronic inflammatory disorder of the airways. In susceptible individuals, this inflammation causes recurrent episodes of wheezing, breathlessness, chest tightness, and coughing, particularly at night or in the early morning. These episodes are usually associated with widespread but variable airflow obstruction that is often reversible either spontaneously or with treatment. The inflammation also causes an associated increase in the existing bronchial hyperresponsiveness to a variety of stimuli.

CODE 2 Cancer

Cancer, also called malignancy, is a term for diseases in which abnormal cells divide without control and can invade nearby tissues. Cancer cells can also spread to other parts of the body through the blood and lymph systems. Cancer includes carcinoma, sarcoma, leukaemia, lymphoma and multiple myeloma and central nervous system cancers. Excludes non-melanoma skin cancer.

CODE 3 Cardiovascular disease

A disease affecting the heart or blood vessels. Cardiovascular diseases include arteriosclerosis, coronary artery disease, heart valve disease, arrhythmia, heart failure, hypertension, orthostatic hypotension, shock, endocarditis, diseases of the aorta and its branches, disorders of the peripheral vascular system, and congenital heart disease.

CODE 4 Arthritis

An umbrella term for more than 100 medical conditions that affect the musculoskeletal system, specifically joints. The three most common forms of arthritis are osteoarthritis, rheumatoid arthritis and gout.

CODE 5 Diabetes

A disease marked by high blood glucose levels resulting from defective insulin production, insulin action or both. The three main types of diabetes are type 1 diabetes, type 2 diabetes and gestational diabetes.

Data element attributes

Collection and usage attributes

Guide for use:	This data element should be used in conjunction with the data elements: Person—chronic condition diagnosed indicator, prisoner health yes/no/unknown code N and Person—chronic condition indicator, prisoner health yes/no/unknown code N to obtain information on a person's current and past chronic conditions. For code 3 Cardiovascular disease instruct the respondent to include conditions which can be controlled by medication.
Comments:	Arthritis, asthma, cancer, diabetes and cardiovascular disease contribute significantly to the burden of illness and injury in Australia. Consequently these chronic conditions have been identified as National Health Priority Areas. Targeting these areas can potentially reduce the burden of disease experienced by people with these conditions and reduce health care required and associated costs.
