# National Healthcare Agreement: PI 01—Proportion of babies born of low birth weight, 2019

## Identifying and definitional attributes

<b>Metadata item type:</b>	Indicator
<b>Indicator type:</b>	Progress measure
<b>Short name:</b>	PI 01—Proportion of babies born of low birth weight, 2019
<b>METEOR identifier:</b>	698938
<b>Registration status:</b>	<a href="#">Health</a> , Superseded 13/03/2020
<b>Description:</b>	The incidence of low birthweight among live born singleton babies.
<b>Indicator set:</b>	<a href="#">National Healthcare Agreement (2019)</a> <a href="#">Health</a> , Superseded 13/03/2020
<b>Outcome area:</b>	<a href="#">Prevention</a> <a href="#">Health</a> , Standard 07/07/2010

## Collection and usage attributes

<b>Computation description:</b>	Low birthweight is defined as less than 2,500 grams.  Excludes multiple births, stillbirths and births of less than 20 weeks gestation.  Analysis by state/territory, remoteness and Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socio-Economic Disadvantage (IRSD) is based on the usual residence of the mother.  Data excludes Australian non-residents, residents of external territories and records where state/territory of usual residence was not stated.  Variability bands are to be calculated for single-year and aggregate years using the standard method (see definition under <i>Computation</i> ).  Presented as a: <ul style="list-style-type: none"><li>• number, and</li><li>• percentage.</li></ul>
---------------------------------	--

<b>Computation:</b>	$100 \times (\text{Numerator} \div \text{Denominator})$  Variability bands: to be calculated using the standard method for estimating 95% confidence intervals as follows:  $CI (CR)_{95\%} = CR \pm 100 \times 1.96 \times \sqrt{[(CR/100) \times (1 - (CR/100))]/n}$  Where $n$ =number of live born singleton babies.  CI = confidence interval  CR = crude rate (expressed as a percentage)
<b>Numerator:</b>	Number of low birthweight live born singleton babies.

Data source type: Administrative by-product data

**Disaggregation:**

2016—Nationally, by (all not reported):

- remoteness (Australian Statistical Geography Standard (ASGS) Remoteness Structure)
- 2011 Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socio-economic Disadvantage (IRSD) deciles

2016—State and territory, by:

- Indigenous status of the mother
- Indigenous status of the baby

2014–16—State and territory, by (all not reported):

- Indigenous status of the mother
- Indigenous status of the baby

Disaggregation by Indigenous status of the mother and the baby are recommended to be reported using 3-year combined data for the current reporting period due to the small number of low birthweight babies born to Indigenous mothers each year, and the small number of low birthweight Indigenous babies born each year. Single year data (2016) will be reported for time series (state/territory by Indigenous status).

Note that data collection methods for Indigenous status of the mother and baby may vary between states and territories.

**Disaggregation data elements:****Data Element / Data Set**

**NMDS / DSS**

[Perinatal NMDS 2014-18](#)

**Guide for use**

Data source type: Administrative by-product data  
Used for disaggregation by state/territory, remoteness and SEIFA IRSD.

Geographic unit used is Statistical Area Level 2 (SA2) in the Australian Statistical Geography Standard (ASGS). If data are coded according to the Australian Standard Geographical Classification (ASGC) boundaries, concordance files are used to map to the ASGS.

**Comments:** Most recent data available for 2019 National Healthcare Agreement performance reporting: 2016 (calendar year data).

Indigenous: Aggregated data (2014 to 2016) will be reported for the current reporting period (state and territory).

Single year data (2016) will be reported for time-series (state and territory).

Information is included in the National Perinatal Data Collection (NPDC) for all live births and stillbirths of at least 400 grams birthweight or at least 20 weeks gestation. Data for this indicator may therefore include live born terminations of pregnancy of at least 20 weeks gestation.

## Representational attributes

**Representation class:** Percentage

**Data type:** Real

**Unit of measure:** Person

**Format:** N[NN].N

## Indicator conceptual framework

**Framework and dimensions:** [Community and socioeconomic](#)

## Data source attributes

**Data sources:**

**Data Source**

[AIHW National Perinatal Data Collection \(NPDC\)](#)

**Frequency**

Calendar years ending 31 December each year

**Data custodian**

Australian Institute of Health and Welfare

## Accountability attributes

**Reporting requirements:** National Healthcare Agreement

**Organisation responsible for providing data:** Australian Institute of Health and Welfare

**Further data development / collection required:** Specification: Final, the measure meets the intention of the indicator.
