

Person—absolute cardiovascular disease risk assessment result categories, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Absolute cardiovascular disease risk assessment result
METEOR identifier:	699029
Registration status:	<ul style="list-style-type: none">• Health, Standard 06/09/2018• Indigenous, Standard 22/10/2018
Definition:	Result categories of a person's absolute cardiovascular disease (CVD) risk assessment, as represented by a code.

Data element concept attributes

Identifying and definitional attributes

Data element concept:	Person—absolute cardiovascular disease risk assessment result categories
METEOR identifier:	585240
Registration status:	<ul style="list-style-type: none">• Health, Standard 13/03/2015• Indigenous, Standard 13/03/2015
Definition:	Result categories of a person's absolute cardiovascular disease (CVD) risk assessment.
Object class:	Person
Property:	Absolute cardiovascular disease risk assessment result categories

Value domain attributes

Identifying and definitional attributes

Value domain:	Absolute cardiovascular disease risk assessment result categories code N
Synonymous names:	Categorisation of CVD risk assessment
METEOR identifier:	585337
Registration status:	<ul style="list-style-type: none">• Health, Standard 13/03/2015• Indigenous, Standard 13/03/2015

Definition: A code set representing the absolute cardiovascular disease risk assessment categories.

Representational attributes

Representation class: Code

Data type: Number

Format: N

Maximum character length: 1

Permissible values:

Value	Meaning
-------	---------

1	High (greater than 15% chance of a cardiovascular event in the next 5 years)
2	Moderate (10-15% chance of a cardiovascular event in the next 5 years)
3	Low (less than 10% chance of a cardiovascular event in the next 5 years)

Data element attributes

Collection and usage attributes

Guide for use: Only includes people who have not had a cardiovascular event.

Assessment of the absolute risk of a cardiovascular event over the next 5 years. The guidelines used in this assessment was developed by the National Vascular Disease Prevention Alliance (NVDPA).

Based on evidence and clinical consensus, it has been suggested that calculation of absolute CVD risk is not necessary for certain population groups who are known to be at increased risk (NVDPA 2012). These groups are:

- persons with diabetes and >60 years old;
- persons with diabetes with microalbuminuria (i.e. >20 mcg/min for all persons, or UACR >2.5 mg/mmol for males, >3.5 mg/mmol for females);
- persons with moderate or severe chronic kidney disease (i.e. persistent proteinuria or eGFR < 45 mL/min/1.73m²);
- persons with a previous diagnosis of familial hypercholesterolaemia;
- persons with a systolic blood pressure result of ≥180 mmHg or a diastolic blood pressure result of ≥110 mmHg;
- persons with serum total cholesterol >7.5 mmol/L; or
- persons aged 75 and over.

People known to be in one of these groups should be classified as 'high risk'.

Reporting of this data element is conditional on a 'yes' answer to 'Person—absolute cardiovascular disease risk assessment result recorded indicator, yes/no code N'.

[Indigenous-specific primary health care NBEDS December 2020](#)

[Indigenous](#), Standard 14/07/2021

Implementation start date: 01/07/2020

Implementation end date: 31/12/2020

Conditional obligation:

Reporting against this data element is conditional on:

- a 'CODE 1 Yes' response to '[Person—absolute cardiovascular disease risk assessment result recorded indicator, yes/no code N](#)', and
- a person being aged ≥ 35 years and < 75 years at the census date, and
- a 'CODE 2 No' response to '[Person—cardiovascular disease recorded indicator, yes/no code N](#)'

Data are provided to the AIHW for absolute CVD risk assessment results recorded within the previous 24 months up to the census date.

Where the tobacco smoking status and/or sex do not have an assessment date assigned, they should be treated as being up to date (that is, as having been updated in the 24 months up to the census date).

DSS specific information:

Data relating to diabetes status should be taken from the most recent record for the client, regardless of how old that record is.
