Value Domain:	Identifier NNX[X]NNNNN

Value domain attributes

Representational attributes

Representation class:	Identifier
Data type:	String
Format:	NNX[X]NNNNN
Maximum character length:	9

Data element attributes

Collection and usage attributes

Guide for use:	Each separately administered health care establishment is to have a unique identifier at the national level. Concatenation of: Australian state/territory identifier (character position 1); Sector (character position 2); Region identifier (character positions 3-4); and Organisation identifier (state/territory) (character positions 5-9), or Specialised mental health service organisation - organisation identifier (character positions 5-9). Specialised mental health service organisation identifiers should be prefaced with a 0. Where services are provided by non-government organisations contracted through a jurisdictional health department, the identifier should be reported as the state/territory identifier for the jurisdictional health department, and blank filled with the character 7 (e.g. 477777777 SA Health department, contracting non-government organisation services).
Comments:	Establishment identifier should be able to distinguish between all health care establishments nationally. This data element differs from the previous data element Establishment—organisation identifier (Australian), NNX[X]NNNNN in that the Specialised mental health service organisation—organisation identifier, XXXX are now included in the concatenation.
