Episode of admitted patient care—procedure, code (ACHI 11th edn) NNNNN-NN

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Procedure
METEOR identifier:	699716
Registration status:	Health , Superseded 20/10/2021 Tasmanian Health , Superseded 17/10/2023
Definition:	A clinical intervention represented by a code that: <ul style="list-style-type: none">• is surgical in nature, and/or• carries a procedural risk, and/or• carries an anaesthetic risk, and/or• requires specialised training, and/or• requires special facilities or equipment only available in an acute care setting.
Context:	This metadata item gives an indication of the extent to which specialised resources, for example, human resources, theatres and equipment, are used. It also provides an estimate of the numbers of surgical operations performed and the extent to which particular procedures are used to resolve medical problems. It is used for classification of episodes of acute care for admitted patients into Australian refined diagnosis related groups.

Data element concept attributes

Identifying and definitional attributes

Data element concept:	Episode of admitted patient care—procedure
METEOR identifier:	647089
Registration status:	Health , Superseded 20/10/2021 Tasmanian Health , Superseded 17/10/2023
Definition:	A clinical intervention that: <ul style="list-style-type: none">• is surgical in nature, and/or• carries a procedural risk, and/or• carries an anaesthetic risk, and/or• requires specialised training, and/or• requires special facilities or equipment only available in an acute care setting.
Object class:	Episode of admitted patient care
Property:	Procedure

Value domain attributes

Identifying and definitional attributes

Value domain:	Procedure code (ACHI 11th edn) NNNNN-NN
METEOR identifier:	699713
Registration status:	Health , Superseded 20/10/2021
Definition:	The Australian Classification of Health Interventions (11th edition) code set representing procedures.

Representational attributes

Classification scheme:	Australian Classification of Health Interventions (ACHI) 11th edition
Representation class:	Code
Data type:	String
Format:	NNNNN-NN
Maximum character length:	8

Data element attributes

Collection and usage attributes

Collection methods:	Record and code all procedures undertaken during the episode of care in accordance with the ACHI (11th Edition). Procedures are derived from and must be substantiated by clinical documentation.
Comments:	The Independent Health and Aged Care Pricing Authority advises the National Health Data and Information Standards Committee of relevant changes to the ACHI.

Source and reference attributes

Submitting organisation:	Independent Health and Aged Care Pricing Authority
Origin:	Australian Consortium for Classification Development National Health Information Standards and Statistics Committee

collected in hospital morbidity systems. Where this is not possible, a minimum of 20 codes should be able to be collected.

Record all procedures undertaken during an episode of care in accordance with theACHI (11th Edition) Australian Coding Standards.

The order of codes should be determined using the following hierarchy:

- procedure performed for treatment of the principal diagnosis
- procedure performed for the treatment of an additional diagnosis
- diagnostic/exploratory procedure related to the principal diagnosis
- diagnostic/exploratory procedure related to an additional diagnosis for the episode of care.

[Admitted patient care NMDS 2020–21](#)

[Health](#), Superseded 05/02/2021

Implementation start date: 01/07/2020

Implementation end date: 30/06/2021

DSS specific information:

As a minimum requirement procedure codes must be valid codes from the Australian Classification of Health Interventions (ACHI) procedure codes and validated against the nationally agreed age and sex edits. More extensive edit checking of codes may be utilised within individual hospitals and state and territory information systems.

An unlimited number of diagnosis and procedure codes should be able to be collected in hospital morbidity systems. Where this is not possible, a minimum of 20 codes should be able to be collected.

Record all procedures undertaken during an episode of care in accordance with theACHI (11th edition) Australian Coding Standards.

The order of codes should be determined using the following hierarchy:

- procedure performed for treatment of the principal diagnosis
- procedure performed for the treatment of an additional diagnosis
- diagnostic/exploratory procedure related to the principal diagnosis
- diagnostic/exploratory procedure related to an additional diagnosis for the episode of care.

[Health](#), Superseded 20/10/2021

Implementation start date: 01/07/2021

Implementation end date: 30/06/2022

DSS specific information:

As a minimum requirement procedure codes must be valid codes from the Australian Classification of Health Interventions (ACHI) procedure codes and validated against the nationally agreed age and sex edits. More extensive edit checking of codes may be utilised within individual hospitals and state and territory information systems.

An unlimited number of diagnosis and procedure codes should be able to be collected in hospital morbidity systems. Where this is not possible, a minimum of 20 codes should be able to be collected.

Record all procedures undertaken during an episode of care in accordance with theACHI (11th edition) Australian Coding Standards.

The order of codes should be determined using the following hierarchy:

- procedure performed for treatment of the principal diagnosis
- procedure performed for the treatment of an additional diagnosis
- diagnostic/exploratory procedure related to the principal diagnosis
- diagnostic/exploratory procedure related to an additional diagnosis for the episode of care.
