Collection and usage attributes

Computation description:	Determine the number of patients that are postponed due to no beds by the hospital pre-admission. Include only those patients identified as postponed 'Pre-Admission'. This can be determined by looking for a matching inpatient episode. If no inpatient episode is found the postponement occurred pre-admission. Otherwise if there is a matching inpatient episode then this is evidence the patient was admitted and the postponement occurred "Post-Admission".
Computation:	$100 \times (\text{Numerator} \div \text{Denominator})$
Numerator:	Count the total number of pre-admission Hospital Initiated Postponements due to no beds for patients waiting on the Elective Surgery Waiting List.
